CAPSTONE PROJECT

Netflix Data Analysis Dashboard using Power BI

PRESENTED BY

STUDENT NAME:Sujal Giri

COLLEGE NAME:Shambhunath Institute of Engineering and Technology, Prayagraj

DEPARTMENT:Computer Science and Engineering

EMAIL ID:Sujalgiri5@gmail.com

OUTLINE:

- Problem Statement
- Proposed System/Solution
- System Development Approach
- Algorithm & Deployment
- Result (Output Image)
- Conclusion
- Future Scope
- References

PROBLEM STATEMENT:

The rapid growth of streaming platforms like Netflix has created a large amount of content data. Analyzing this data manually is difficult and time-consuming. There is a need for an interactive dashboard that can visualize Netflix content by genre, ratings, country, and release year to help understand trends and patterns in the data.

PROPOSED SOLUTION:

The proposed solution is to build an interactive dashboard using Microsoft Power BI to analyze Netflix content data. The dashboard will visualize information such as genres, ratings, country distribution, and yearly trends. Using charts, maps, and filters, users can easily explore and understand patterns in the dataset. This helps in gaining meaningful insights from large amounts of streaming data.

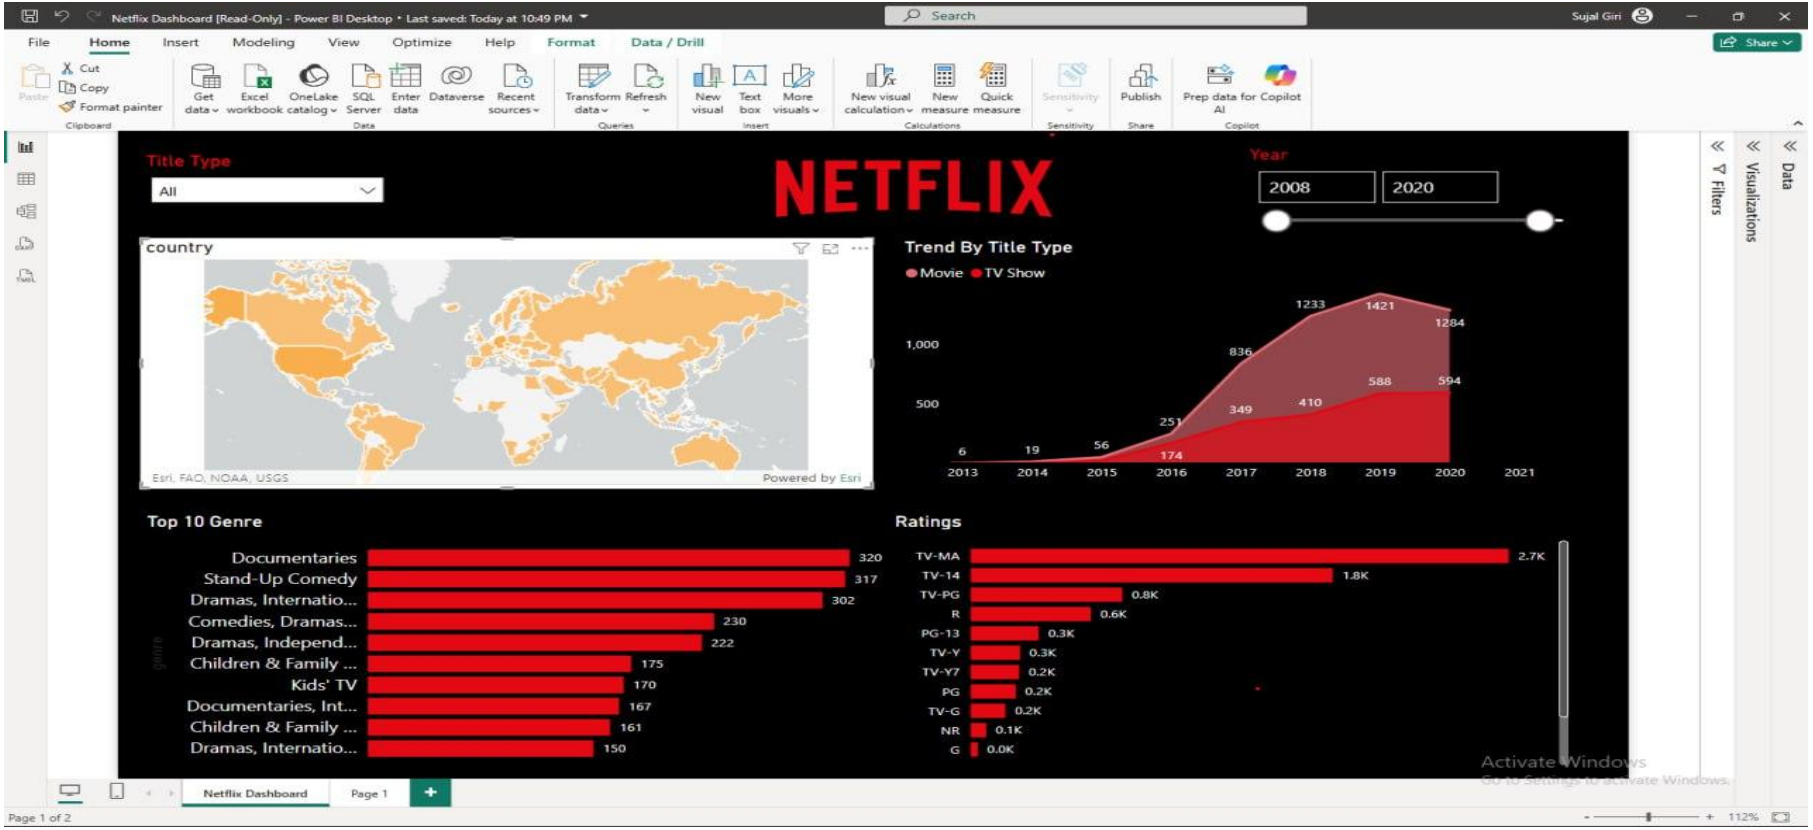
SYSTEM APPROACH:

- Microsoft Power BI
- Dataset (Netflix Titles Dataset – CSV)
- Data Cleaning using Power Query
- Data Visualization using charts and maps

ALGORITHM & DEPLOYMENT:

1. Collect Netflix dataset from online sources.
2. Import dataset into Power BI.
3. Clean and transform the data using Power Query.
4. Create relationships and measures.
5. Design visualizations such as bar charts, line charts, and maps.
6. Build an interactive dashboard with filters and slicers.

RESULT:



Netflix Dashboard [Read-Only] - Power BI Desktop • Last saved: Today at 10:49 PM

CONCLUSION:

The Power BI dashboard provides useful insights into Netflix content distribution. It helps analyze genres, ratings, country distribution, and yearly trends effectively. The dashboard makes the data easy to understand and visually appealing.

FUTURE SCOPE:

- Add more streaming platform data
- Use machine learning for content prediction
- Build real-time dashboards
- Deploy dashboard on web platforms
